Managing a Route
Once you have selected a destination and calculated a route, you can modify the route, preview turns, and save it for later reuse.

1. Tap the Routes icon on the Map Page tool bar to display the Routes Page. Then tap the desired Routes Option icon.
2. Tap the Turns Page to view a list of turns for the route. Tap a turn entry to preview the turn on the map.
3. Tap Recalculate if you have left the route and want to calculate from your current location.
4. Tap Detour if you want to detour the route around a traffic jam or road construction.
5. Tap Stop Navigation if you want to quit the route.
6. Tap Route Preferences if you want to change the way a route is managed in order to meet your personal requirements.
7. Tap Edit Vias if you want to add some new points to alter your route.
8. Tap Saved Routes if you want to save the current route or view a previously saved route.
9. Tap Speak if you want to listen to current route status voice prompts.

Using the Find Feature:
1. Tap the Find icon on the Map Page tool bar to display the Find Menu.
2. Then select a category icon and tap it to open the search list. To narrow the list of items, tap the second field to display the list of search options. Choose “Near Current Location”.
3. To shorten the list even more, tap the category field to display a list of sub-categories to refine the type of map item you are searching for.
4. To further shorten the search, enter a key word in the name of the item you are searching for in the “Name” or “Containing” field.
5. Tap OK to complete route calculation.
6. When complete the route will be displayed on the Map Page along with navigation instructions and voice prompts.
Navigating to a Destination
A destination can be determined in two ways: you use the Map Pointer to mark a point on the map and then tap the Routes icon... or use the Find Feature to search for a destination from the map database and then, when found and highlighted, choose the "Route To It" option from the Find Options Menu.

Using the Map Pointer:
1. Tap the point on the Map Page that you want to navigate to. If there is information about that point in the map database, it will display next to the point.
2. Then tap the Routes icon to display the Routes Page.
3. Tap the "Route To" field and the route will begin to calculate. A pop-up window will offer three preferences for calculating the route. Select an option and tap OK to return to the Map Page to complete calculation.
4. When the calculation is complete, the route will display as a purple overlay on top of the map.
5. The first maneuver on your route is displayed at the top of the map page and is complemented by a voice prompt.
6. To view all of the turns on the route, open the Routes Page and tap the Turns Page icon. A list of the turns will display and a preview page for each turn will display when the turn on the list is tapped.

Navigating using the Map Page
Navigation is the process of going from your current location to another, and the Map Page has features to help you do that.

Data Fields - Provide GPS Status when not moving, Direction of Travel or Next Street Ahead, Compass Direction, Speed and Current Location

Map Detail - With downloaded detailed maps: Residential Streets, Rivers, Lakes, Points of Interest and Individual Addresses. Oriented with North Up unless in Track Up mode.

The Position Arrow - Indicates your current location. Tap to center it on the map page. Points in the direction of travel.

The Map Pointer - Marks map locations using the stylus. Displays information for a location if available.

The Map Scale - Tapping the Map Scale Box in the lower left corner of the map displays the moving Map Scale. Tap the arrows to move up or down the scale. Tap the desired scale to close.

The Tool Bar - Quick ways to get things done. Tap the icon to get the result shown below.

The Main Menu - Tap the Main Menu on the tool bar to access every Garmin Que feature.

About Garmin Que - Tells you the version of operating software and your unit id number.

Map Setup - Allows you to customize the way your maps display.

System Setup - Allows you to adjust system operating features.

Find - Allows you to search for and navigate to locations in the map database, arranged by categories. More about this on the next page.

GPS Info - Provides current information about the GPS receiver and satellites overhead.

Routes - Allows you to calculate, manage, modify and save a route to a selected destination. More about this on the next page.

Utilities - Tracks, Log, Sun, Moon, Hunt & Fish, and Measure Distance.

Trip Computer - Displays current information about your travel status, such as distance, speed, driving time, driving average and more.
